PROLab is the software application for a professional evaluation of any type of interlaboratory study with 4 to 1000 participants. It is conceived to guarantee compliance with all relevant standards and legal prescriptions.

Indeed, apart from an array of computational rules covering all current standards, PROLab offers the QuoData SOPs which are necessary for a cogent report. Let us work together to optimize your performance.

Get in touch with us.
A broad range of our statistically secure evaluation SOPs are implemented in PROLab along with compelling display options. Flexible tools can be deployed to carry out special, statistically cogent evaluations whose results are then displayed in impressive diagrams. For example: for equivalence studies of different analytical methods (Standard and Plus), or for a laboratory’s long-term performance analysis (Plus). Impress your customers with the professionalism and expediency of your interlaboratory studies.

- Create professionally designed charts and tables
- 27 chart types to help you tease out the most subtle informational content, and present it in an intuitive and visually compelling manner. A powerful chart editor allows you to customize any chart as required
- Choose between manual or automatic generation of reports
- Over 70 report templates to choose from – or create your own template
- Alternatively, you can make use of our report-customization services (free of charge for some licenses)

Licenses include regular PROLab software updates
Introductory and more advanced workshops are offered at least once a year on favorable terms
The PROLab-hotline – available during working hours and free of charge – via telephone or email
Take advantage of a special offer to benefit from the statistics-hotline as well (according to ISO 17043)
We adjust and expand the software according to your requirements (and charge according to the amount of work involved)
If required, we take over the performance or evaluation of an interlaboratory test – contact us!

Sounds interesting? Then learn more about PROLab, the software application which is used by many customers the world over, from the US American Food and Drug Administration and the EU community reference laboratories to many German federal agencies such as the Institute for Materials Research and Testing (BAM), the Environment Agency (UBA), and the Office for Consumer Protection and Food Safety (BVL).

PROLab™ Plus:
Specially conceived for PT providers offering a large range of PT schemes and for laboratories with a heavy validation schedule

PROLab™ Standard:
For biotech firms, research laboratories and PT providers

PROLab™ Smart:
For biotech firms, research laboratories and PT providers

RING™:
For small labs, and for the occasional performance of validation studies

PROLab is used in the following areas:
the analysis of foodstuffs and animal feed, medical diagnostics, the analysis of pharmaceuticals and cosmetics, materials and products testing, the analysis of the environment, toxicology, forensics, etc...
